

Natalia Soto

801-649-7843 nataliamelissas@gmail.com LinkedIn

Summary

Software engineer with an AI-first approach to development. Creates AI agents that automate coding, testing, and GitHub deployments using Claude Code and markdown pipelines. Experienced in Linux environments, Python, and Bash scripting. Committed to clean and secure code, graceful error handling, and systems built to scale.

Education

Computer Science B.S. - University of Utah

Leadership: Social Media Director of Society of Women Engineers, Member of Women in Computing

Instructional Design and Educational Technology M.Ed. - University of Utah

Founder and course designer at talitech.org teaching K-12 coding using research-backed learning strategies

Skills

AI: Claude Code, AI agents, building MCP servers, markdown workflows, context engineering, prompt engineering, Copilot

Systems and Scripting: Linux, WSL, Bash, Python, PowerShell, YAML

Backend: Typescript, C#, GraphQL, MongoDB, REST APIs, Scala, AWS, Docker, Terraform IaaS, OWASP

Frontend: ReactJS, TypeScript, JavaScript, Angular, SCSS/SASS, Tailwind, NodeJS, Build Tools

Cloud: AWS SDK, AWS Amplify, Azure Blob Storage, Cloudflare

Experience

Software Engineer - Ivanti

South Jordan, UT | Aug 2023 - Present

- Led AI development for the engineering team. Maximized AI productivity through agents, skills, and rules to automate code building, testing, and GitHub deployments; drove team adoption through bi-weekly learning forums that tripled individual productivity.
- Developed customer-facing MCP server features, ensuring seamless integration through precise API alignment and comprehensive documentation for implementation teams.
- Optimized critical MongoDB queries by ~40% through compound indexes and aggregation pipelines.

Software Engineer - Pluralsight

Draper, UT | Feb 2023 - Sept 2023

- Spearheaded development of a scalable cloud-based checkout page on Linux-backed AWS infrastructure using event-driven architecture, TypeScript, and NewRelic for performance monitoring.
- Built a responsive checkout UI using React and Apollo GraphQL, delivering a fast and intuitive customer purchase flow.

Software Engineer Intern - Proofpoint

Draper, UT | May 2022 - Aug 2022

- Built Python and Bash automation on Linux EC2 instances using the AWS Cost Explorer API and MS Teams webhooks to identify and eliminate unused cloud resources, reducing monthly AWS spending.
- Rapidly learned Terraform to provision AWS infrastructure and built Python Lambda functions for platform cronjobs, reducing manual operational overhead.

Software Engineer Intern - Proofpoint

Draper, UT | May 2019 - Aug 2020

- Engineered cloud security features in Scala and GraphQL, implementing access control mechanisms and traffic monitoring for third-party application integrations.
- Built and shipped a production ReactJS and TypeScript web application, collaborating with engineering and design teams to deliver a major new product feature.
